## SECTION A

# INTRODUCTION TO OPENTYPE®

### WHAT IS OPENTYPE?

OpenType® is a cross-platform font file format developed jointly by Adobe and Microsoft. The two main benefits of the OpenType format are its cross-platform compatibility (the same font file works on Macintosh and Windows computers), and its ability to support widely expanded character sets and layout features, which provide rich linguistic support and advanced typographic control.

OpenType fonts can be installed and used alongside PostScript® Type 1 and TrueType fonts.

The range of supported layout features may differ in the various FontFont OpenType packages, therefore each OpenType package will be accompanied by this FF Info Guide listing the layout features supported by this specific font package.

You'll find a glossary of all available OpenType layout features in Section B of the general FF OpenType User Guide.

## ABOUT FF SCALA SANS OT BOLD

Martin Majoor has enhanced his elegant serif FF Scala with a companion sans-serif family. Again it is the simplicity that makes Scala Sans so captivating, while at the same time its distinct character is immediately recognizable. First, the family comprised six variants including an italic small caps style, a fairly rare beast in the typographic zoo. Later, FF Scala Sans 2 included two Condensed weights as well as the two missing Small Caps fonts. Now, more than ever, the Scala family has been suitable for complex book typography. The package also includes a bonus font, FF Scala Hands, 81 pointing hands with and without serifs, right and left handed, feminine and masculine, thumbs up and thumbs down ... the list goes on. The third package, FF Scala Sans™ 3 includes new light and black weights. With these additions, FF Scala Sans™ is ready for the world of advertising.

## ABOUT MARTIN MAJOOR

Martin Majoor has been designing type since the mid-1980s. After a student placement at URW in Hamburg, he started in 1986 as a typographic designer in the Research & Development department at Océ-Netherlands. There he carried out research into screen typography and worked on the production of digital typefaces for laser printers.

In 1988 he started working as a graphic designer for the Vredenburg Music Centre in Utrecht, for whom he designed the typeface Scala for use in their printed matter. Two years later FSI FontShop International published FF Scala™ as the first serious text face in the then-new FontFont-Library. In 1993 FF Scala™ was augmented with a sans-serif version, FF Scala Sans™, which was also released by FSI. In the eyes of the designer the sans and the serif versions complement each other admirably. They follow the same principle of form but are two distinct designs. The second largest newspaper in Holland (Algemeen Dagblad) uses both FF Scala™ and FF Scala Sans™ for text and headlines and is a good example of how the two families can work together.

In 1994 Majoor started working on the design of the Dutch telephone directory, for which he did both the typography and, more importantly, created a new typeface. The face is called Telefont and comes in two weights: Telefont List and Telefont Text. The Dutch phone company PTT Telekom holds exclusive rights to both fonts. Perhaps as a reaction to the very formal work on the phone books, Majoor designed FF Scala Jewels™ in 1997, a quartet of classic decorative typefaces based on the capitals of FF Scala™ Bold.
