Radim Zeman

We recently brought a tutorial on how to change themes on the SX1 phone. Today we bring instructions on how to create these themes in a very simple way, up to four at once thanks to the simple program Themerizer ROFL.

The author of this program is Shamil Randuev, who appears on the website www.oslik.ru. To use this program, you must first have a patched FW (**instructions are here**). Otherwise, the program will not work on your phone and the themes will not be displayed.

**What will we need:**

Themerizer ROFL   ➜ 🖳

How to work with the program

1. Download, unzip and run the ThemerizerROFL.exe file. You will see the working window of the program. The program itself is very simple and intuitive.

2. At the top you can see the four theme names exactly as they are consecutively in SX1: BlueSky, Beach, City, Magenta. Click on individual tabs to select a given topic.

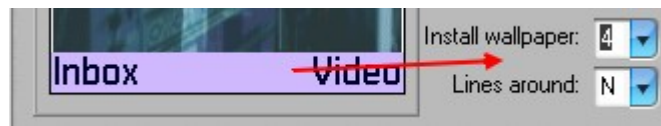

3. Click the Import Bitmap for current button, choose an image from your computer in JPG, GIF or BMP format in size 176x220 pixels and type Open.

4. If you want to do this for all topics, repeat point 3 on each tab separately.

5. If you have images assigned, you only need to select how many wallpapers to install, whether you want perimeter lines around the image and press **Save SIS** . Finished themes will be exported to the SIS installation file, which will be saved in the directory on the computer where you have Themerizer installed under the name themerizer.sis.

1. Copy the themerizer.sis file to your MMC card via SDS, MPM or Total Commander (<u>instructions are here</u>).

2. When you are prompted for where you want to install the application during installation, enter the memory card as an option.

3. After successful installation, a new icon of the bearded gentleman will be added to your SX1 :o)

4. Now go to **Settings / Settings / Phone / Display** in SX1 and select one of the color palettes. Note that the top part of the display already changes depending on how you select the theme. Once you have your selection, go back to the menu and click on the Themerizer icon (the bearded gentleman). Enter Options and depending on which color palette you have selected, also select which Wallpaper you want to install. The Beach palette is first, so Activate Wallpaper 1 etc., confirm and wait for the message that the wallpaper is installed.

5. **Restart your phone**

6. If you followed the steps correctly, you have a new look on your SX1 display.

You can use the same procedure to change all four color palettes and their wallpapers as you chose them when making the themes. So you can have dozens of SIS files with different names on the MMC card and change them as you like.
