

M0 declaration for dHW

Product: Jerry

Part-project leader: Flemming Bach Kristensen

Risks:

- The Alps Display is not performing well when rotated 180 degrees compared to the specified use case in the TTD, therefore it's not recommended to use this source. Philips is the preferred solution due to visual inspections and following parameters important for the rotation:
 1. Colour uniformity (Red) vs. viewing angle
 2. Colour uniformity (Green) vs. viewing angle
 3. Colour uniformity (Blue) vs. viewing angle

Appendices: M0 checklist for dHW.
