

M0 declaration for Digital Hardware

Product: Obsidian

Sub-project leader: Trine Lendrup Bech (PD HW 2 AAL)

Risks and conclusion:

1. The project have decided that Obsidian will use a new not qualified battery. The battery must physical be similar to Polaris battery, but the capacity must be 730mAh. A new battery is under development and therefore not yet qualified. There are not defined a second source to the battery. Procurement Engineering has required a second source to the battery.
2. Speaker suppliers have not confirmed delivery for ramp-up.

Appendices: M0 checklist for Digital Hardware according to MEP Issue 7.01
