

**KeypadLock** is a software service which is able to automatically lock the keypad of your phone. You can unlock the keypad as normally pressing the left soft key and the star ' \* ' key. The software has extended capabilities when is about to lock the keypad after the specified timeout.

#### **Enabling/Disabling the keypad lock service:**

- Start the **KeypadLock** application.
- In the main menu shown select the first option **Enabled/Disabled** and press the center pointer key or use the **Options->Change** command option.

#### **Modifying the settings(capabilities) of the keypad lock service:**

- In the main menu, select the **Settings** option and press the center pointer key or use the **Options->Change** command option to open it.
- To set the keypad lock timeout press on the **Lock Timeout** field and change the value of the time.
- **Activate Lock** option allows you to set the behaviour of the keypad locking service. If **Always** is set, then the service will lock the keypad after the specified timeout. If **In Main Screen** is set then the keypad will be locked after the specified timeout but only if the phone shows the main screen (idle screen). If **Exclude Apps** is set then the keypad is not locked if the current application shown by the phone is selected in the **Select Applications** option. This allows you to work with your most preferred applications without to be disturbed by the keypad locking.
- The **Select Applications** option will only be shown if you set **Exclude Apps** value in the **Activate Lock** option as above. This option allows you to select your the most used applications which will not allow the service to lock the keypad if one of these applications is running and you use it.
- The **Play Sound** option allows you to set if a sound will be played when the service will lock the keypad.

#### **Autostart feature**

Nokia Series 60 2<sup>nd</sup> edition phones have the autostart feature. If you shutdown the phone, the service will not be disabled. After you power-on the phone, if the keypad lock service is enabled, this will automatically start and will have effect without your intervention. (Nokia N90, N70, N72, 6630, 6680, 6681, 6682, 6670, 6260, 3230, 7610, 6600)

Nokia Series 60 3<sup>rd</sup> edition phones do not have the autostart feature. If you shutdown the phone, the service will be disabled. You have to enable the keypad lock service each time when you power-on your phone. (Nokia E60, E70, E61, E50, N91, N93, N92, N80, N73, N71)
